Directions (1-8): Read the given passage carefully and answer the following questions. Certain parts have been highlighted to help answer the questions.

Self-help groups (SHGs) play vital role in poverty eradication in Indian villages. A growing number of poor women in different areas of India are members of Self Help Groups and they actively occupy in savings and credit, as well as activities like income creation, natural resources management etc. The savings and credit hub in the SHG is the key component and offers ability to create some control over capital and other investments. The SHG scheme has proven to be very successful for women empowerment and offering to break slowly away from exploitation and **isolation**.

NABARD defines SHGs as “small, economically homogenous affinity groups of rural poor, voluntarily formed to save and mutually contribute to a common fund to be lent to its members as per the group members’ decision”. A self-help group is a village-based financial intermediary usually composed of 10–20 local women. Members make small regular savings aid over a few months until there is enough capital in the group to begin lending. Funds may then be lent back to the members or to others in the village for any reason. The Self Help Groups (SHGs) have become **extensive**, successful component of both rural and urban development in India. Women band together in to groups and motivate each other to build new opportunities for income generation. Most of the SHGs start without any outside financial capital by saving regular charity by the members. These offerings can be very small. After a period of regular savings the SHGs start to give loans from savings in the form of small in-house loans for micro enterprise activities and spending. Only those SHGs that have utilized their own funds well are assisted with external funds through linkages with banks and other financial mediators.

S32. Ans.(b)

Sol. let total article manufactured in each company = 100m

$$\text{Required percentage} = \frac{96m - 88m}{88m} \times 100 = 9\frac{1}{11}\%$$

S33. Ans.(b)

Sol. Total no. of article manufactured by company A = $\frac{96}{8} \times 100 = 1200$

S34. Ans.(c)

Sol. let total no. of article manufactured by company C and company D are c and d respectively.

ATQ

$$\frac{6.8\% \times c}{4\% \times d} = \frac{2}{3}$$

$$\frac{c}{d} = \frac{2}{3} \times \frac{40}{68}$$

$$c:d = 20:51$$

$$3 \times 1 + 2 = 5$$

$$5 \times 2 + 4 = 14$$

$$14 \times 3 + 6 = 48$$

$$48 \times 4 + 8 = 200$$

$$200 \times 5 + 10 = 1010$$

$$1010 \times 6 + 12 = 6072$$

So, there should be 1010 instead of 1020.

S37. Ans.(b)

Sol. Wrong no. is 590

$$48 \times 2 - 12 = 84$$

$$84 \times 2 - 12 = 156$$

$$156 \times 2 - 12 = 300$$

$$300 \times 2 - 12 = 588$$

$$588 \times 2 - 12 = 1164$$

$$1164 \times 2 - 12 = 2316$$

So, there should be 588 instead of 590.

S38. Ans.(e)

Sol.

Wrong no. is 12

So, there should be 10 instead of 12.

S39. Ans.(c)

Sol.

Wrong number is 24.

And three consecutive odd no. be $(y - 2)$, y , $(y + 2)$

ATQ,

$$4x - 3y = 49 \dots(i)$$

$$x - 3 + y - 2 = 23$$

$$x + y = 23 + 5$$

$$x + y = 28 \dots(ii)$$

Multiplying (ii) by 3 and on solving

$$\therefore x = 19$$

$$y = 9$$

$$\therefore \text{largest even number} = 19 + 3 = 22$$

Quantity II - Let CP of the item = $100x$

So, Marked price = $160x$

$$\text{Selling price} = 160x \times .90 \times .80 = 115.2x$$

Sol. As, the area of square = $(\text{side})^2$

And, it is given that area of square = 196sqcm

$$\text{So, } (\text{side})^2 = 196 \text{sqcm}$$

Side of square = 14cm .

Now, the radius of circle = $14/2 = 7 \text{cm}$

Quantity I – Length of rectangle = 14cm

Breadth of rectangle = $\frac{7}{2}$ cm

So, area of rectangle = $14 \times \frac{7}{2} = 49 \text{sqcm}$.

Quantity II –

As the radius of the circle = 7cm

So, the side of the cubical box = $7 \times 3 = 21 \text{cm}$

So, the area of one face of the cubical box = $21 \times 21 \text{cm} = 441 \text{sqcm}$.

Remaining work = $240 - 150 = 90 \text{ units}$

Amount of work completed by Hemant = $90 - 10 \times 6 = 30 \text{ units}$

Mohan score = $100-15 = 85$

Sunita score = $240 - (100+85) = 240 - 185 = 55$

2	R/			R/
1	R/	S	S	R/

M lives in just north-east of L. R lives in the south-west of Y. D lives just above L in same named flat, so case 2 is ruled out here. G lives below Y and both of them live on an even numbered floor

Floors	Case 1		Case-2	
	Flat A	Flat B	Flat A	Flat B
5	W			W
4		Y		R/
3	D	M		R/
2	L	G		R/
1	R	S	S	R/

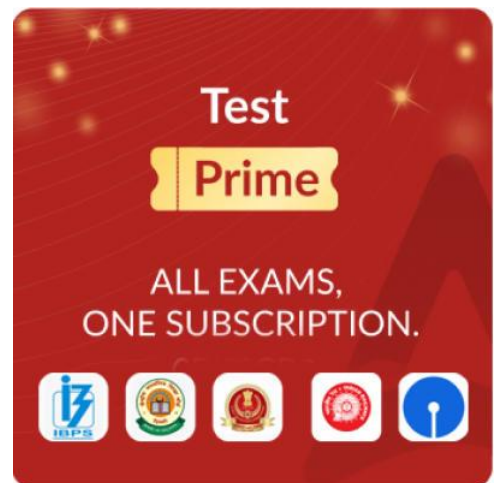

T lives above Z. Thus, the final arrangement is: -

Floors	Flat A	Flat B
5	W	T
4	Z	Y
3	D	M
2	L	G
1	R	S

M lives on 3rd floor and S lives on 1st floor
Thus, the required sum = 3 + 1 = 4.
